Future Electric

Sun Powered Yachts recently helped with the design of a pretty unique solar install in Hawaii. The Ocean Energy OE35 Wave Energy Buoy is a 500kW wave energy converter being tested in the US Navy's Wave Energy Test Site (WETS) at Kaneohe Bay, on Oahu, for 1 year and feeding power to the nearby Marine Corps Base. The test is being done in conjunction with the US Navy, DoE, UH, Sustainable Energy Authority Ireland (SEAI), and Ocean Energy.

Floating on the ocean's surface, the device incorporates a trapped air volume, with the lower part open to the sea. Wave pressures at the submerged opening cause the water to oscillate and drive the trapped air through a turbine to generate electricity. This energy can be exported to the grid or used in other offshore applications.
