Future Electric

Normally moored below Sutton Weaver Bridge, The Danny riverboat was a fitting backdrop for an IWA campaign cruise to showcase one of the country's most under-appreciated navigations. The River Weaver combines rich industrial heritage with exceptional natural beauty. Within a short distance of former industrial sites are thriving wildlife habitats, including some of the highest concentrations of kingfishers found on any UK navigation. The Weaver also offers a reliable and easy cruising experience due to it being non-tidal. Thanks to its large catchment area, water levels rarely become problematic, and the navigation has never been subject to lock restrictions because of low water levels. Its staffed locks make it easy to navigate, yet the river remains significantly underused.
