Future Electric

Kayakers and paddleboarders joined historic narrow boats and a replica Dutch tug boat made their way to the current limit of navigation on the Wendover Arm, the first powered boats to make the journey for some time, battling siltation and vegetation. Despite decades of volunteer effort, public investment and substantial restoration work already completed, this section of the canal remains closed, fenced off and increasingly neglected. Blocked access to the turning point also means very few boats can travel along the section that remains open. According to IWA, the issue goes beyond navigation. The Wendover Arm is a significant environmental asset. Fed by rare chalk streams, it supports a rich aquatic habitat that would be almost impossible to recreate today. It also performs a vital engineering function, supplying water to the Grand Union Canal at the Tring Summit and helping keep locks operational.
