ELECTRIC BOATS AGGREGATOR

Free downloadable digital magazine

No: 31

The monthly digital magazine featuring the pick of electric boating news info and trends

Boats | Motors | Batteries | Fuel Cells | Solar | Waterways

news aggregator: *an online platform that collects news stories and other information as it is published and organises it in a specific manner for ease of access and viewing*

Future Electric

According to Neoeast, an Italian environmental specialist, over 40% of the microplastics in our water come from polyester particles, which are shed when we wash our clothes.

The company actively seeks ways to use the latest technology to manage the earth's natural environment and has recently developed an industrial scale microplastic separator for use on larger ships. The system is also intended for use within a marina's water discharge system.

Once developed further, the company expects this system to become available for much smaller vessels.

Whilst not a pioneer of this technology – Suzuki have already introduced a microplastic filter to their 2-litre range of outboards – the concept is scalable.
